

## Project Features List

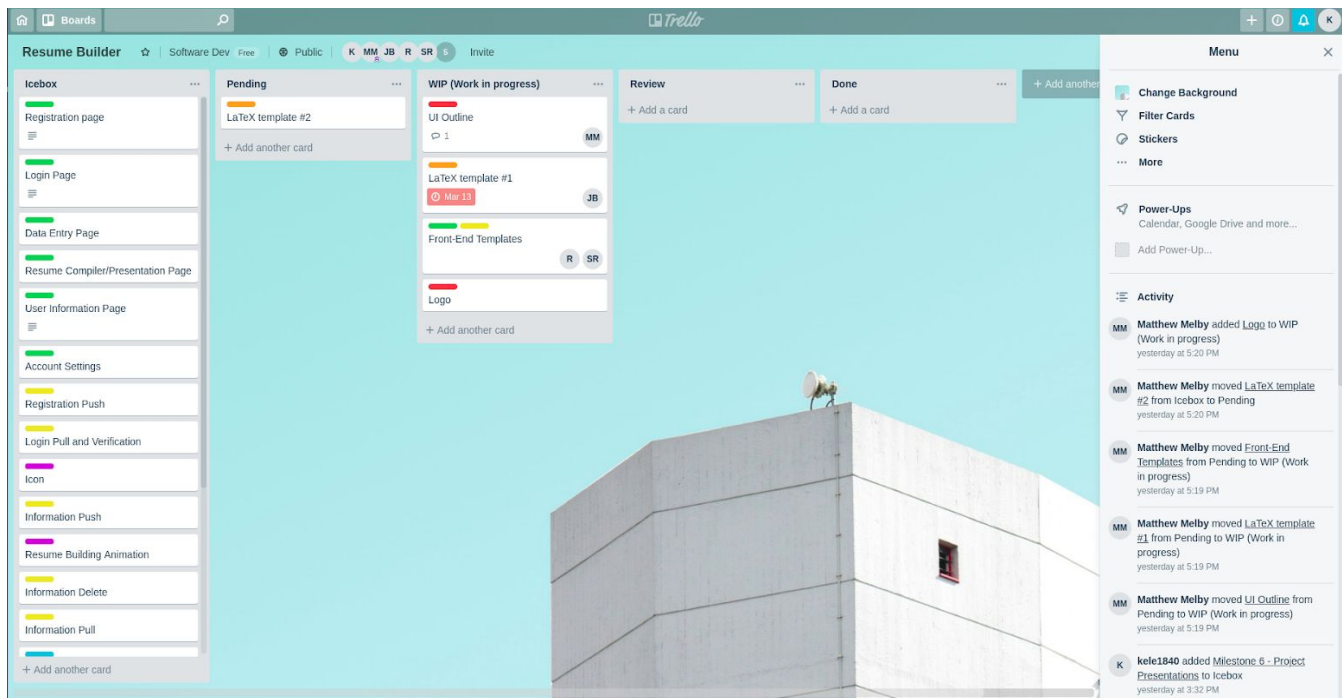

- Web Access
  - The application will be web based, which gives anyone with internet access the ability to access the app.
- Login Page
  - To allow the user to have a profile where their information is stored to be placed on resumes or future use (in relation to database of user resume data)
- Multiple Templates
  - Allowing the user to select from different resume templates (~3) to allow for different options in terms of how they want their resume to be formatted
- Plain-Text Output
  - In the event of a user wanting plain text output to use text content apart from specific resume templates, they will have that option (instead of piping their choices through a premade template option)
- Input Limits
  - Placing a cap on the amount of characters the user can place to avoid over-cluttering a section on the resume
- Database of user Resume data
  - To be stored and accessed later for future resume creation.

## Requirements

- Functional:
  - Login / sign up system
  - Must have backend service to store user data.
  - Statistical weights of keywords, user attributes, and ability of user to weight different keywords higher than others to produce a tailored resume or set of content
  - Must have at least 2 resume templates.
  - Ability to weight different categories higher than others in order to tailor to specific positions.
  - Must have resume save function where the user can stop and continue editing their resume.
  - Must be able to export finished resume as PDF.
- Non-Functional
  - Visual UI needs to be clean.
  - Logo.
  - User experience needs to be streamlined.
  - Application Name
- Backend Service: Firebase

## Project Plan

- Trello is our main project management tool: <https://trello.com/b/eeO8zp3r/resume-builder>

- Gantt Chart for project task, task delegation, and task timeline
